

ABDUL GHAFFAR

Sukkur, Pakistan | +92 310-3588834 | abghaffar360@gmail.com | github.com/AbdulGhaffarcs | linkedin.com/in/abdulghaffarcs

EDUCATION

Sukkur IBA University

Sukkur, Pakistan

Bachelor of Science in Computer Science; Focus: AI/ML, Algorithms, Software Engineering

Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Systems, Software Engineering

EXPERIENCE

Terminal Bench (Parsewave)

Remote

Benchmark Engineer, Contract

March 2026 – Present

- Designed and shipped Docker-isolated evaluation tasks for frontier LLM coding agents; accepted tasks spanned computer vision (synthetic topographic contour analysis), computational geometry (structural steel cross-section measurement), and combinatorial reasoning (chromatic sorting matrices).
- Built deterministic test harnesses using pytest, reproducible container environments, and tamper-resistant scoring, with each task reviewed against strict acceptance criteria for correctness and reproducibility.

PROJECTS

NIARAD — AI Study Agent

Dec 2025 – Present

github.com/AbdulGhaffarcs/niarad_agent

- Built an offline RAG-powered study assistant with a multi-tool ReAct agent (web search, code execution, PDF/DOCX generation) over a Next.js 14 frontend and FastAPI backend.
- Implemented an SM-2 spaced-repetition engine with auto-generated flashcards and mastery dashboards, plus an LLM-powered intent classifier replacing fragile keyword blocklists.

ForgeAI — Autonomous Software Engineering Platform

2026

private codebase

- Built a multi-agent orchestration platform — dedicated planner, architect, developer, reviewer, QA, security, and performance agents coordinated through a state-machine orchestrator — that plans, builds, and reviews code with vector memory, sandboxed execution, and full git integration.

Caprae — AI-Readiness Scorer

2026

github.com/AbdulGhaffarcs/ai-readiness-scorer

- Built a lead-intelligence tool that scrapes company websites, analyzes tech stacks, and scores B2B SaaS companies on AI-readiness, growth potential, and acquisition fit for market research use cases.

Niches & Jobs Daily Agent — Autonomous Research Agents

2026

private codebase

- Built two scheduled agents that run daily at 6am PKT — one ranks trending niches from Reddit, TikTok, and X by earning potential, the other pulls same-day remote listings from WeWorkRemotely, RemoteOK, and Remotive — delivering results to a dashboard and chat report.

Additional projects: XVision — 5-class chest X-ray classifier on ResNet-50, team project, github.com/shoabahmedcs/xvision. ConnectChat — end-to-end encrypted messaging app, github.com/AbdulGhaffarcs/connectChat.

SKILLS & ADDITIONAL INFORMATION

AI / ML: PyTorch, TensorFlow, transfer learning, computer vision, data pipelines

LLM Engineering: Anthropic API, Ollama, RAG (BM25 + Jaccard, FAISS), agent architectures, prompt engineering

Backend & Languages: Python, TypeScript/Node.js, SQL, FastAPI, Supabase, Cloudflare Workers, REST APIs

Certifications: Kaggle — Machine Learning; Kaggle — Deep Learning; Object-Oriented Programming – C++

Achievements: Passed Geektastic timed JavaScript assessment (ES6, hoisting, TDZ, prototype chain) and Shopify Dawn developer test (Figma → vanilla JS sections)

Languages: English (Professional, B2), Urdu(Native)
